

Install Kubernetes

Phase 5 Practice Project Set 4

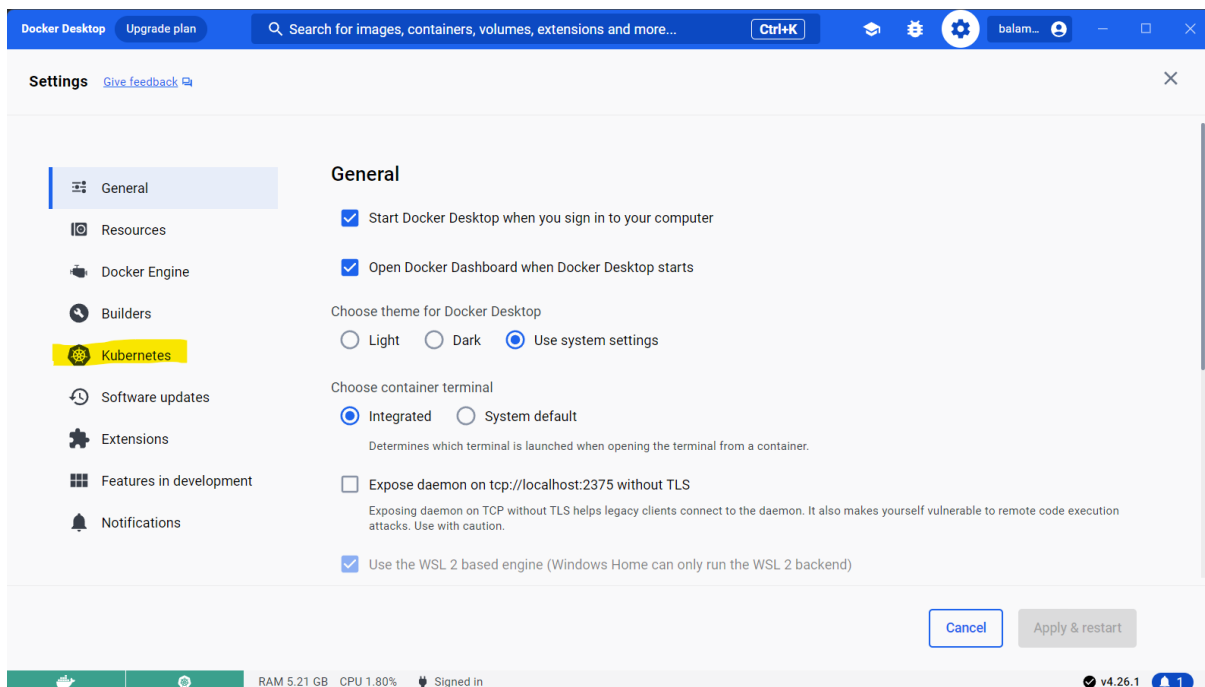

Name: C Balamanikandan

Installing Kubernetes via docker:

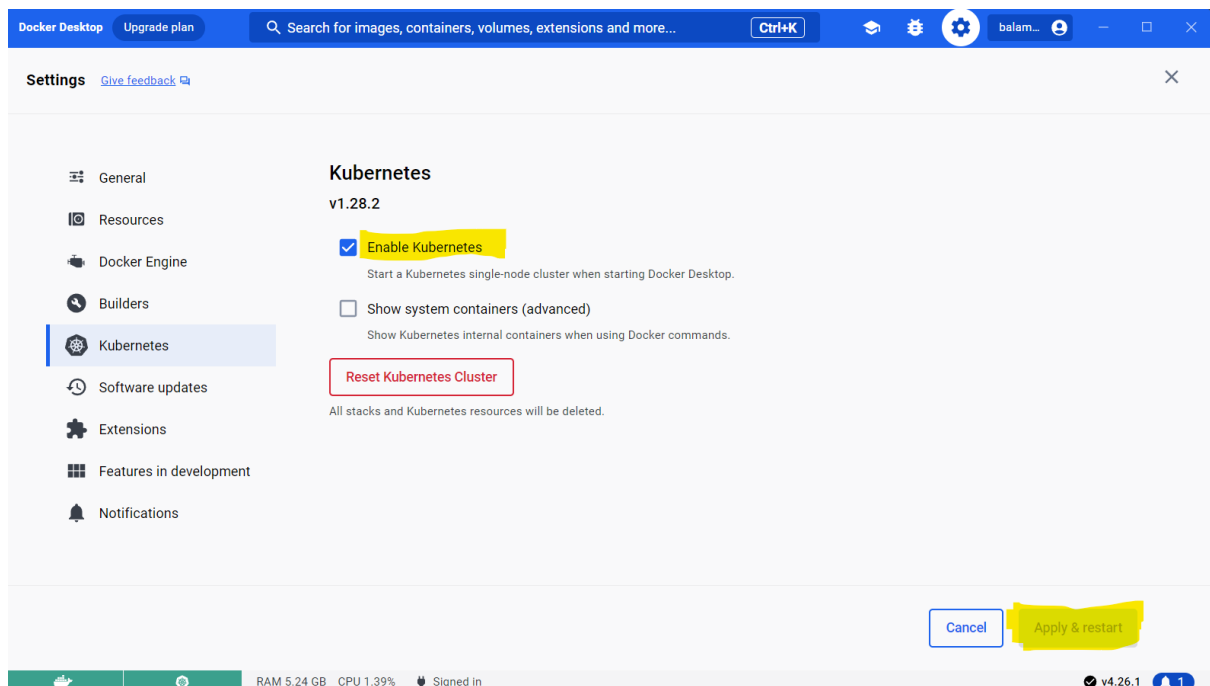

Open docker and click on settings:

In Settings click on **Kubernetes** option:

In Kubernetes page click on **Enable Kubernetes** and then **Apply & restart** button.

(this will start installing the Kubernetes)

To check Kubernetes installed on your machine:

Go to cmd prompt and type the following command:

kubectl version

```
C:\Users\balam>kubectl version
Client Version: v1.28.2
Kustomize Version: v5.0.4-0.20230601165947-6ce0bf390ce3
Server Version: v1.28.2
```

If it shows the version number, then it confirms that Kubernetes successfully installed on the machine.

We can also check it in docker desktop Application:
